Allergies

What may help-

Probiotics

Cromolyn sodium

Methylsulfonylmethane (MSM)

Butterbur

Vitamin C

Wim Hof breathing

Pesticides & herbicides

Avoiding pesticides & herbicides by eating organic (& US grown) and chlorination & flouridation by using a filter & letting the water sit out for an hour (out of the tap) to evaporate may reduce allergies.

Agriculture corporations use more than 100 times more pesticides & herbicides than before GMO's were introduced.

Bedbugs

Bedbugs release a lot of histamine & even 90 days after eradication may leave histamine levels 20x higher.

Histamine as an emergent indoor contaminant: Accumulation and persistence in bed bug infested homes

Zachary C. DeVries, Richard G. Santangelo, Alexis M. Barbarin, Coby Schal <https://doi.org/10.1371/journal.pone.0192462>

Steroids

Inhaled & especially oral steroids for asthma appear to cause visible brain damage, shrinking the brain's white matter.

van der Meulen M, Amaya JM, Dekkers OM, et al

Association between use of systemic and inhaled glucocorticoids and changes in brain volume and white matter microstructure: a cross-sectional study using data from the UK Biobank

BMJ Open 2022;12:e062446. doi: 10.1136/bmjopen-2022-062446

Steroids are less damaging when used only occasionally & only after every other option has been tried.

Inhaled steroids

Beclomethasone ([Qvar](#)),

budesonide ([Pulmicort Flexhaler](#))

ciclesonide ([Alvesco](#))

fluticasone ([Flovent HFA](#))

fluticasone propionate ([Flovent](#))

fluticasone furoate ([Arnuity Ellipta](#))

fluticasone/salmeterol ([Advair Diskus](#))

fluticasone furoate/umeclidinium/vilanterol ([Trelegy Ellipta](#))

mometasone/formoterol ([Dulera](#))

Arnuity Ellipta, Asmanex, and Trelegy Ellipta, may last for 24 hours instead of the others 12 hours.

Steroids, especially inhaled steroids, increase mouth, nose & respiratory infections & pneumonia deaths.

Inhaled steroids cause osteoporosis, cataracts, glaucoma, diabetes, heart disease, bruising, adrenal problems & brain damage.

Anticholinergics

Anticholinergics reduce choline in the brain which causes ADHD symptoms, early dementia & increased mortality. Tiotropium (Spiriva Respimat) is an anticholinergic & appears to increase heart attacks.

Wheat

The most common allergies-

Milk, eggs, fish, shellfish, peanuts, tree nuts, soy, wheat, yeast, corn. Our current wheat has many times the gluten of the wheat we ate for thousands of years- spelt. Spelt's gluten is water soluble & breaks down easily, newer wheat just gets tougher & harder to break down when kneaded. Newer wheat has an enzyme blocker that may make it far more difficult for us to digest it. The newer wheat appears to increase mortality significantly- a 39 percent increased risk of death in those with celiac disease, 72 percent increased risk in those with gut inflammation related to gluten, and 35 percent increased risk in those with gluten sensitivity but no celiac disease.

Probiotics

Probiotics appear to help to prevent allergies, as well as reduce heart disease, cancer, and bacterial infections. Probiotics may work best when taken an hour after the last food of the night and with a large glass of water, with only water drank until the morning.

Cromolyn sodium for allergies and hayfever

Cromolyn (Nasalcrom for hayfever or generic) appears to work against hayfever/allergies and is neither an antihistamine nor a decongestant nor a corticosteroid. It appears to cause no drowsiness, no jitters, no “rebound” nasal congestion, and it’s non-habit forming. In the short term it may be slightly less potent but may lower allergy/pollen sensitivity more over time. It is also an asthma medicine. It may be most effective against allergy & exercise induced asthma.

Cromolyn may permanently end asthma symptoms if used only when having asthma/allergy/hay fever symptoms, then sprayed twice with an hour in between. Every time its used this way it can be twice as long before neede again.

Treatment of perennial allergic rhinitis with cromolyn sodium:
Double-blind study on 34 adult patients

Robert H. Cohan et al.

I used to have “force 10” hayfever, which feels like the worst cold you’ve ever had. I had to keep my windows closed overnight through the morning, and if I was driving in the summer without air conditioning I had a choice of passing out from the heat with the windows up or being miserable with hay fever. I tried cromolyn sodium because it said it had no side effects. It worked the first time I tried it. It also worked the next day. But then I didn’t need it again for two days, then four days, then a week, then two, then a month, etc. The cromolyn sodium helped me stop being allergic to pollen, & appeared to help lower ALL my allergies. Now I am no longer allergic to pollen. Cromolyn sodium has worked for others with horrible hay fever as well.

It may have worked so effectively because I sprayed it once then again after my nasal passages opened up more 45 minutes after.

Baking soda

Taking 1/2 ts of baking soda 2x a day a half hour or more before a meal and an hour or more after a meal appears to fully stop autoimmune inflammation, significantly reduce & eliminate cancer symptoms, bacterial infections, kidney disease & a common cause of kidney stones, eye diseases, & enhance endurance (as used by pro athletes) by buffering lactic acid.

Methylsulfonylmethane (MSM)

MSM is a major anti-inflammatory/painkiller that is found in many foods that also helps hair & nails. Once in the body DMSO works the same as MSM. MSM is made from DMSO. Most users take 2-8g per day.

MSM appears to improve reduce allergy symptoms, constipation, dementia symptoms in people with Alzheimer's, muscle spasms, scar tissue (topically), giardia infections, and autoimmune diseases like rheumatoid arthritis/lupus/scleroderma.

Vitamin C

Vitamin C lowers histamine levels, & is used as treatment for allergies & pollen. Liposomal vitamin C may be 25x more effective than other forms of vitamin C. It can be made very cheaply at home with an ultrasound cleaner (mixer), vitamin C and lecithin. Mercola has an inexpensive version that can be taken daily, & Liv on Labs has a more expensive version people more often use for acute attacks.

Wim Hof breathing

The Wim Hof method- no longer feel cold/hot/stress/autoimmune overreaction

Wim Hof is a Dutch man who learned to become immune to cold, heat, & control his immune response to a strong degree. He has been in ice up to the neck in a tub for almost 2 hours. He has ran a marathon in a desert at 104 degrees with no water or food, and one above the Arctic circle barefoot. He has killed an injected bacteria that should have made him very sick in a medical experiment. Now he is teaching others how to do it, and it only takes one minute a day & people get big benefits after just the first time.

In this link is an explanation of how to do this his way, which includes meditation, a breathing method, and cold exposure:

Here is the simplified one minute a day version-

If you have a heart or lung condition ask your doctor if fast breathing & holding your (non) breath is ok for you. If you are sick you can wait until healthy before starting. Wim Hof wisely recommends only doing this from a secure sitting position for safety and NEVER around water.

What I found important is heavy breathing for oxygenation for 30 breaths/30-60 seconds, then breathing out completely & holding the

nonbreath (empty lungs) until my body makes me take a breath (15-30 seconds). It's ok if the first time is only 15 seconds, our ability gets a little better every time.

Wim Hof recommends exercising during the breath holding like pushups or some other exercise on the ground to avoid falling. I do it after eating my rice (carbs) so I have the energy for the exercise, but if people would rather just hold the (empty) breath it appears to work nearly as well. Wim Hof has people do this six times a day, but once a day is fine for the long run.

After I did this once for one minute I was able to be comfortable in my apartment at three degrees colder than ever before for a full day (57 degrees). Every time I do this I am able to experience greater & greater amounts of cold. Wim Hof recommends testing ourselves with cold showers or ice buckets, but I have seen all the benefits without.

I have tested myself by being very comfortable after one week in my apartment in the low 50s for hours. Most people don't like the cold and the knowledge they don't have to do the cold challenge but will still lose their sensitivity to cold makes it more likely they will do the exercise. We know its working when we walk outside in the cold & it doesn't bother us anymore & we don't feel like turning on our car to warm it up anymore.

One funny thing about the ability to endure cold- my knees still don't like long exposure to cold temperatures even if the rest of my body has no problem:-)

Conscious control of cold & heat

Wim Hof suggests paying attention to how the body feels & consciously giving energy to different parts, especially if they are cold. This is supposed to give conscious control of our body temperature. I did this in a sauna when too hot to stay in & thought about being cool inside & I was soon comfortable enough to stay another 40 minutes. Meditating seems to improve the conscious control of body temperature. I've also done this when out in the cold & it works just as well. It may also be useful to breath out & hold an empty breath once or twice whenever feeling too cold, hot, or stressed in order to get immediate relief as well as the long term benefit. Holding (empty) breath after an exhale is also supposed to help cramping when exercising.

Control of stress

I and others have found that our stress levels have gone down measurably since doing the breathing exercise once a day.

Autoimmune responses

Wim Hof & the people he trains have been able to kill bacterial infections that should have made them very sick in an experiment after just 90 repetitions. That's three months when doing it once a day. It appears that their bodies are shutting down the overactive immune response to the bacterial infection. Other people have noted their autoimmune disorders (like rheumatoid arthritis) being helped greatly by the breathing method.

<http://www.medicaldaily.com/natural-inflammation-treatment-breathing-exercises-and-ice-baths-may-quell-immune-337890>

<https://www.newscientist.com/article/dn26102-three-ways-the-iceman-controls-his-immune-system/>

<http://www.livingflow.net/influence-immune-system-at-will/>

<http://www.livingflow.net/wim-hof-method-autoimmune-disease-rheumatoid-arthritis/>

Cold exposure?

So I suspect that we get many of the benefits even if we don't do the extreme cold exposure that Wim Hof suggests and that holding our nonbreath/empty lungs is the key. Doing this once a day is easily

possible (I do it after eating so I have the energy) and results start immediately, after the first time.

Conscious control over internal temperature

What Wim Hof's suggestion of the extreme cold exposure (explained in the link) coupled with meditating on being warm appears to do is give conscious control over body temperature, especially with practice. We can all use this when we are in a situation we feel cold in.
