

Cancer breakthru

Description

Use this as an aide to your own research and share with your doctor as appropriate. You can use [drugs.com](https://www.drugs.com) or other trusted health websites to look up the latest information on prescription drugs, herbs, foods or other treatments possible side & interaction effects often by typing in the name of two drugs or drug/herb and interaction effects into a search engine.

Antiparasitic vs Cancer

Both cancer & parasites use some of the same rare techniques to evade our immune system. Drugs/supplements/herbs that stop parasites often stop cancer as well.

The antiparasitic drugs ivermectin & niclosamide, fenbendazole & neem appear to be extremely effective against cancer. Ivermectin has low side effects even in overdose. Niclosamide can have stomach effects helped by ginger & mint. Since so little niclosamide is absorbed orally, under the tongue & gums or nebulization may work much stronger & faster.

Gum disease

Gum disease appears to be a major cause of cancer & heart disease & alzheimers. Gum disease appears to be caused by the dental procedures of root canal & tooth extraction that doesn't include pulling the ligament, cleaning out the dead tissue, & raising the platform of the bone. Getting a 3-D image to find pockets of infection & finding a dentist that will sterilize it with ozone then use a red laser to regrow the bone may help reverse the damage and help reverse heart disease & cancer.

Lyme & other tic infections

Tic infections can sometimes trigger cancer & successful treatments can help stop the cancer growth. The most effective found, green leaf stevia, tastes good in vegetable dishes & can be put in capsules as well. Coconut oil (lauric acid becomes monolaurin), cat's claw (an herb), & digestive enzymes appear to be very effective.

Cooking- no formaldehyde or mercury

Cooking w/any oils except unrefined organic coconut/palm oil or grass fed organic beef lard turns the polyunsaturated fat in the oils into formaldehyde, causing cancer & heart disease. If the oil is refined it often has a lot of mercury added, as with refined/white rice/flour/sugar, high fructose corn sugar (now called corn sugar/dextrose/anything corn in label) & FD&C food colorings (red#,blue# etc) that can also have a lot of added lead. Genetically modified corn & soy also have tons of Roundup/glyphosate poured on it. The genetic modifications of that age may create food sensitivities, and the Roundup/glyphosate kills so much good bacteria of the stomach (an antiprobiotic), apparently causing diabetes, heart disease, & cancer. They've already settled for \$10 billion for just nonHodkin's lymphoma, and another \$10 billion set aside for future lawsuits- not including other cancers, heart disease, diabetes.
