

Gastroparesis

Description

To Jesus:

You can use this as an aide to your own research and share with your doctor.

You can use drugs.com or other trusted health websites to look up the latest information on prescription & herbal drugs possible side & interaction effects.

Gastroparesis

Delayed gastric emptying is often caused by type I or type II diabetes. It can involve nerve damage & the drugs used to treat it can quickly cause serious side effects.

Betaine HCL may help as low stomach acid is often associated.

Alpha lipoic acid 600mg when waking up & after every meal may also help by moderating blood sugar rise & preventing & regrowing damaged nerves at high doses.
