

Iodine

## Description

Does iodine stop all infections?

Does iodine stop all infections?

*default watermark*

Iorinse is a highly concentrated type of iodine that has most irritants removed. Dentists use it at 50x higher concentrations than povidine iodine for patient mouth rinse for infection prevention.

Do all tested viral, fungal, and bacterial infections in studies appear to be vulnerable to Iorinse iodine mouth rinse, nasal spray, gargle, or vapor inhale through the nose for prevention?

Dentists give patients a 30 second mouth rinse of an iodine formulation that has most of the problematic and useless types of iodine removed. It is so much safer that one of the formulations, Iorinse iodine, 1oz at 100ppm is 500X stronger than the 0.2 parts per million PI that was so successful in studies.

The concentrate at 500ppm for 33oz is less than \$20 in bulk on dental supply websites.

At that strength, would just a few drops (5) on a toothbrush and brushing the gums then teeth stop any hidden gum/periodontal disease & uncontrolled tooth decay bacteria (periodontal disease bacteria) seemingly caused by root canals & tooth extraction w/out ligament removal that is found in & is the likely source of so many heart attacks, early Alzheimer's disease & cancers?

Do respiratory infections concentrate in the lungs, nose, throat, & mouth to spread to others, and does repeated treatment with iodine or 1-3% food grade hydrogen peroxide of any of these areas appear to stop the infections?

Is food grade hydrogen peroxide at 1%-3% also effective against almost all tested but just takes more frequent dosing?

Topical?

How many other disorders do we have to find iodine treats or iodine deficiency causes before daily supplementation makes sense? Hypothyroidism, birth defects/miscarriages?
