

Parasites

Description

To Jesus:

You can use this as an aide to your own research and share with your doctor.

You can use [drugs.com](https://www.drugs.com) or other trusted health websites to look up the latest information on prescription & herbal drugs possible side & interaction effects.

Parasites

Most people have parasites, but most modern medicine has ignored it. Getting treated for parasites every year may help health problems the body would be able to fight off if not for the additional parasitic load.

The most effective antiparasitics with the least side effects may be ivermectin & mebendazole.

Cancer is often associated with parasitic infection. Antiparasitics have often been found to reverse cancer symptoms as well. Ivermectin has often been found to also help reverse viral infection symptoms.

Fenbendazole

Fenbendazole is used by vets for animals. Because it is inexpensive & over the counter it is often used by people for parasites. It appears much more bioavailable when taken with DMSO or salicylic acid (or aspirin). People with liver problems avoid it & people usually start with a small dose & increase if no side effects.

Autoimmune symptoms

Ivermectin or fenbendazole can sometimes get rid of the parasites that can trigger autoimmune rheumatoid arthritis.
