Policosinol- nanosoma, Metadichol

Policosinol is found in a number of foods-sugarcane, wheat, peanuts & often derived from rice bran. In concentrated form it appears to be a strong antiviral.

It may activate vitamin D receptors & help the body make vitamin C. People who take it appear to be able to heal wounds & soft tissue injuries via stem cell regeneration.

It may normalize thyroid stimulating hormone & testosterone if low. It may inhibit TNF-a & NF-xb. It may improve energy, cognition &

longevity.

Nanosoma is a micronized version of policosinol. Taking policosinol under the tongue for a minute may be more effective than orally & may come closer to the effectiveness of the micronized version.
