

Spinal surgery

Description

Stem cells

Stem cells can often help to heal a disc w/little or none of the permanent injury dangers of surgery.

Disc seel

Far safer than surgery, & 70% effective in people who've usually had every other treatment including surgery fail, is fibrin made from red blood cells injected into discs to heal them.

Autoimmune

Introducing foreign materials into the body can cause an autoimmune reaction & lifelong pain & disability, as so many with breast implants have found. Spine implants can cause the same autoimmune disease as breast implants.
